

Commercial Pilot Licence

A Commercial Pilot Licence will allow you to fly an aircraft for work in a private or commercial operation.

Again, continuing to build on the strong foundations created during the RPL and PPL training, you will build flight experience hours, study and complete the 7 theory exams required for this licence.

You have the option of completing your training in.

- ▶ Piper Archer II
- ▶ Cessna 172M
- ▶ Cessna 182T
- ▶ Duchess BE76

You train at your own pace and pay-as-you-fly. There is no full-time commitment with rigid deadlines to meet, although we do recommend consistency so you don't have to repeat lessons unnecessarily

What can you do with a CPL

A commercial pilot licence allows you to work as a pilot and be pilot in command/co pilot for private and/or commercial operations.

something else will go here that talks about the different opportunities available for a newly licenced CPL holder.

wonder what next? You could improve your opportunities to fly more often by getting a Night VF Rating to fly at night,

Private/ Instrument Rating to fly under instrument meteorological conditions.
